CUTTING-EDGE BURNERS FOR HEATING AND INDUSTRIAL APPLICATIONS

Innovative soul

Being a specialist in burners conception and manufacturing, ELCO is nowadays one of the leaders in the combustion technology. By linking a strong innovative ability to a developing will, ELCO conceives performing and reliable burners that respect the environment as well as corresponding services, in order to establish a lasting relationship with its customers.

The mission

ELCO always looks for the best technologies and develops new ones to improve the efficiency of its solutions. Our R&D Laboratories are committed to develop innovative technological solutions allowing to:

- optimize the running of the installations lowering the use of primary energy;
- ease professional's work improving human machine interface and maintenance;
- preserve the environment lowering acoustic and exhaust gas emissions.

Product range

Our experience at combustion disposal
in a complete range of burners from 11 kW to 80 MW:

VECTRON

11 - 2300 kW
Gas, light oil and
dual fuel

PROTRON

15 - 550 kW
Gas and light oil

NEXTRON

250 - 11200 kW
Gas, light oil and
dual fuel

EK EVO

250 - 13000 kW
Gas and dual fuel

N10

1300 - 16000 kW
Gas, light oil and
dual fuel

Professional staff

Taking advantage of a staff composed of technicians and engineers with a long experience, ELCO is able to provide professional support to the customer in order to define together the best solution and to develop and manage the project through its entire life-cycle.
ELCO Service activities define the standards in the market and each customer can rely on high performance and reliable products.

HO/GHO-TRON

68 - 17000 kW
Heavy oil and
dual fuel

D-TRON

230 - 34000 kW
Gas, light oil, heavy oil
and dual fuel

EK-DUO

600 - 16000 kW
Gas, light oil and
dual fuel

RPD

500 - 80000 kW
Gas, light oil, heavy oil
and dual fuel

Worldwide network

Capitalising more than 80 years of working experience, ELCO has been capable to build loyal partnerships and today can count on reliable Partners all over the World.

Combining an instinctively global perspective with a genuinely multicultural approach, ELCO today offers skilled and experienced experts available in more than 70 Countries.

In Europe

3 production plants

6 commercial branches

Strong commercial presence through a network of reliable dealers and partners

Worldwide

2 Sales Offices in Russia and China

Distribution in over 70 Countries

ELCO is developing a worldwide network of valuable Service Partners, consisting of well-trained local engineers, to carry out its service operations.

Time to market

To promptly deal with the requests of an ever changing market, ELCO has adopted a finished products and spare parts warehouse of over 8000 square meters.

Quick response to customer requests and consistent warehouse availability allow to reduce the delivery time and give a better support to the end user.

Reliable supply of spare parts

Spare parts have always had a great importance inside the ELCO world. Considering the high amount of parts involved in every single product, some of these parts might naturally need to be substituted. ELCO can count on a International network offering original spare parts in order to guarantee the highest quality, reliability and safe continued operation of the appliance.

Solutions for every need

A long presence in the international market has allowed ELCO to build a strong experience in burner customization and to develop products that are able to guarantee reliability, quality and high performance even in the most extreme working conditions.

Competent advice

Your contacts at ELCO and its partners are recognized experts with years of experience.

Our worldwide support starts from concept creation to planning, design and project management up to commissioning and on-going operation of the plant throughout its life cycle.

As an ELCO customer, you can rely on your installation to perform reliably. Our guarantee is backed up by a service that sets standards in our field.

References

ELCO has been chosen as the ideal partner from worldwide companies to design installations where technical specifications and environmental conditions require a specific design.

In the next pages you will find a selection of our international references.

Technologies and Systems

To constantly improve its products, ELCO is committed to develop innovative technological solutions allowing to optimize the running of the installations, to ease professional's work, and naturally to preserve the environment. In order to provide quick responses to its market's exigencies, the range of ELCO burners is entirely conceived around a consistent combination of Systems.

MDE2 System

Permanent communication of information easy to use

Equipped with the MDE2 System, the universal language Elcogram and the 5-button keypad, ELCO burners adjust themselves and constantly communicate to professional operators:

- real time information about each ignition and during the running;
- statistical information about burner operation recorded during the whole year before the maintenance operations.

Elcogram, a universal language

As ELCO products are distributed worldwide, the company has developed a universal language composed of pictograms and numerical data. The pictograms use the majority of the symbols used on the wiring diagrams which are recognised and understood by all Nations. This ensures that information is easier to read than ever before.

GEM System

Electronic burner control: high safety and low costs

The use of electronic technologies in burner control systems helps to reduce running costs, improve reliability of operation and lower pollutant emissions. The electronic combustion manager used on ELCO burners are responsible not only for burner control (formerly the task of the traditional automatic combustion control unit) but also for fuel/air regulation. Data stored electronically has replaced the mechanical characteristic curve and help to achieve an unprecedented level of precision in air/fuel ratio regulation across the burner's entire control range, a prerequisite for efficient, energy- and cost-saving operation.

The GEM System controls the position of one or more activators simultaneously.

The servomotors of the air flow and oil components are controlled by a microprocessor which contains set points defined for each load curve. An additional advantage of the GEM is that it provides specific information on all the commands and states of the overall system: these can be accessed directly or by remote control.

The digital programming is user-friendly, it is carried out through the display of the MDE2 System or through a PC by using a simple procedure facilitated by easy instructions in a clear language.

AGP System

An outstanding technology for gas burners

Developed and produced by ELCO, the AGP System (proportional air-gas) provides:

- perfect stability of the air-gas mixture;
 - a constantly high CO₂ content over the whole burner power range;
 - precise control of air excess, which is important for high-efficiency operation, in particular for condensing generators.
- The AGP measures: the gas pressure downstream of the gas train, the air pressure behind the flame holder, the furnace backpressure.

Any variations in the three pressures are immediately and simultaneously recorded by the system which automatically restores the correct gas/combustion air ratio.

AGP maintains a constant gas/combustion air ratio even in the presence of:

- positive or negative variations in the gas pressure;
- variations in air flow due to changes in the electrical supply voltage or fouling of the ventilation system;
- variations in the furnace and flue draft pressure on start-up and during load changes.

Variatron

Speed regulation: noise reduction and energy saving

To improve the performance of heating or industrial systems, ELCO applies Variatron (fan speed control). Conventionally, the air in modulating burners is regulated by an air flap. In the partial load range, a large amount of the air pressure generated by the ventilator goes to waste.

With speed regulation, the speed of the combustion-air fan is varied continuously depending on the burner output required. Full speed is reached only at maximum burner output. In the predominant partial load range, the lower speed translates into significant reductions in power consumption and noise emissions. The Variatron operates in phase with the air damper both with the GEM System and with the AGP System, which guarantees a combustion with minimum air excess by continuously monitoring all operating conditions.

Application of the Variatron to ELCO burners results in:

- electrical consumption savings of the order of 50%;
- turndown ratio of up to 1:10, resulting in perfect adaptation to system requirements and improvement in average seasonal efficiency, in particular with condensing or low-temperature boilers or specific processes;
- silent start-up and average overall noise reduction between 2 dB(A) (at maximum power) and 12 dB(A) (at minimum power).

Low Noise System

Increase the comfort in-use and protect the environment

Among all the harmful things that men have to bear with every day, the most annoying is noise, which is difficult to reduce and expensive to get rid of.

This is the reason why ELCO has developed quiet burners both by selecting sound absorbent materials, and by treating each noise sources internally. The main noise comes from the air intake and the air mixing in the fan wheel: all the ELCO burners are equipped with a sound trap on the air intake channel leading to the fan.

This brings the acoustic level to a compatible value in respect of the environment.

Technologies and Systems

ELCO R&D Laboratories have capitalised more than 80 years of experience in the field of standard burners (with normal emission) in order to develop a parallel range of low emissions burners. In addition to scrupulously respecting the limits prescribed by European directives regulating pollutant emission, the goal of ELCO is to guarantee values largely below those established by regulations.

In order to reach these results the low NOx burner range takes advantage of innovative combustion technologies.

Diamond Head Low emissions and reliable operation

The principle of the Diamond Head gas combustion is based on the internal recirculation of the combustion flue gases. These are partially drawn into the base of the flame via triangular openings positioned at the end of the combustion head.

The position and geometry of the gas injectors are such that a significant quantity of combustion flue gas is drawn in and rapidly mixed with air and gas at the root of the flame. This mixture crosses the main reaction area, slowing the combustion, which resulted in lowering the main flame temperature.

The result of this staging combustion is a significant reduction in the formation of thermal nitrogen oxides.

The advantage of this internal recirculation technique is an automatic adjustment to the quantity of recycled combustion flue gases: the volume of the flame is always as low as possible, which has a very minor effect on the nominal power of the generator, unlike external recirculation systems.

Free Flame The pinnacle of low-polluting burner engineering

The principle of the Free Flame combustion is based on rapid gasification of the fuel by recirculating the combustion gases internally and allows the fuel-air to mix quickly.

Once the fuel has been vaporized, it will burn and stabilize 30 centimetres from the combustion head.

The flame appears to "float freely" hence the name "Free Flame". The heat absorbed by the gasification oil will cause a significant drop in the flame's temperature and a decrease in the formation of thermal nitrogen oxide.

Technical assistance

Commissioning

For safe and efficient operation of your burner system it is very important that the burner is commissioned by an expert. The combustion will be optimally adjusted over the whole power range of the burner, and all the safeties will be tested. Of course you will receive a report. ELCO's service technicians are able, like no other, in performing this job adequate and competent, to run your installation worry-free.

Maintenance and inspection

The burner is a crucial part of the installation. To keep your installation in good conditions, it is important to maintain the burner periodically. It is also very important to inspect all the safeties to ensure that your system operates safely.

Fortunately, you can rely on the professional services of ELCO which can perfectly perform this service for you.

The Burner Academy

In order to respond to the needs of our customers we created the Burner Academy, a real school where the know-how of our technicians is diffused to our partners.

We provide the opportunity for boiler room personnel, operators and engineers to attend a series of training sessions carried out on our test bench by highly qualified instructors, who held the courses in English, German, French, Italian and Dutch language.

The Burner Academy uses various training locations where boilers are installed and where people can be trained in theory and in practice. We offer courses at different levels and also the possibility to handle all your needs in a customer-specific training.

Worldwide Service Network

In Western Europe, ELCO has a well organized service network.

Outside Western Europe ELCO uses a network of partners, consisting of well-trained local engineers, to carry out its service operations. These technicians are able to perform both commissioning and local service and they do it in a very professional way.

Robust and professional structure

The design of the EKEVO® is the result of a successful synergy between ELCO key features and essential design.

EKEVO® introduces a brand new aluminium casting body and confirms the choice of ELCO about light colors and harmony of each shape.

Professionals will appreciate the flexibility of a 180° orientable air inlet, the compact switch box and the easy to clean glossy paint.

Electronics: easy and comprehensive

All EKEVO® models are fully electronically controlled and they are equipped with the exclusive ELCO man-machine interface allowing simple and effective programming operations.

A total advantage in terms of flexibility

The EKEVO® are characterized by their total flexibility of installation; they have been designed to be installed in different ways: up-firing, down-firing, upside-down or side-to-side (twin chamber boilers). Options and configurations have been foreseen in order to fulfill any application need.

Smart solutions for easy maintenance

The maintenance of the EKEVO® burners can comfortably be carried out thanks to a wide opening above the housing, allowing easy access to the combustion components up to the fan, and thanks to the choice of the material: aluminium, lightweight to handle and resistant at the same time.

Maintenance operations are possible keeping the original combustion components setup.

MAIN TECHNICAL FEATURES

- Two stage progressive/modulating forced draught burner
- Fuels:
 - natural gas, $Hi = 6,99 \dots 11,39 \text{ kWh/Nm}^3$
 - LPG, $Hi = 25,89 \text{ kWh/Nm}^3$
 - light oil, viscosity $6 \text{ mm}^2/\text{s}$ at 20°C , $Hi = 11,86 \text{ kWh/kg}$
- Combustion technology:
 - Low NOx class 2 ($<120 \text{ mg/kWh}$) and class 3 ($<80 \text{ mg/kWh}$) in gas operation according to EN676
 - Low NOx class 2 ($<185 \text{ mg/kWh}$) and class 3 ($<120 \text{ mg/kWh}$) in light oil operation according to EN267
- Integrated switch cabinet (ISC System) with modular concept complete for an easy installation with:
 - BT300 control box
 - fan motor direct start-up
 - enumerated connection terminals
 - three-phase electrical power supply
 - available as options: power regulator, speed controller, O_2/CO regulator and BUS interface
- Innovative design allowing easy access to burner components for fast start-up and reduced maintenance time and space
- Three flame tube lengths available
- Orientable air intake box
- Secured burner head adjustments during maintenance (RTC System)
- Closing of the air damper on burner shut-down
- Multiple gas train matching according to the inlet gas pressure
- Gas train factory assembled and tested for tightness and electrical security
- Products are in compliance with EN676 and EN267 European standards and with the following directives:
 - 2014/35/UE Low Voltage Directive
 - 2014/30/UE EMC Directive
 - 2009/142/CEE Gas Appliances Directive
 - 2006/42/EC Machinery Directive
 - 2011/65/EU RoHS2 Directive

PACKAGING

The burner is delivered in 2 packages containing:

- burner body with mounted combustion head, boiler fixing accessories and technical documentation;
- gas train and filter.

280 ... 4500 kW

2 stage progressive/modulating electronic in gas and in light oil (Low NOx class 3)

- Fuels:** natural gas, $Hi = 6,99 \dots 11,39 \text{ kWh/Nm}^3$;
light oil, viscosity 6 mm²/s at 20°C, $Hi = 11,86 \text{ kWh/kg}$
- Emission class:** Low NOx class 3 (<80 mg/kWh) according to EN676 in gas
Low NOx class 3 (<120 mg/kWh) according to EN267 in light oil
- Protection level:** IP 41

**TECHNICAL DATA**

Test conditions conforming to EN676 and EN267 - Temperature: 20°C - Pressure: 1013,5 mbar - Altitude: 0 m a.s.l.

BURNER VARIANTS (options already mounted in factory)

LCM MODULE (for communication, O₂ control, frequency converter)

Module mounted in factory, requested for O₂ control, Variatron and communication buses connections (the module is available also on request as a separate kit)
 Note: only one LCM module is necessary for these 3 options
 For all dual fuel models the LCM module is already included

3751645

MODULATING OPERATION

RS55 (Regulator RWF55 + instruction manual), mounted in factory on the switch cabinet – to be connected to the appropriate probe (see "BURNER KITS" session)	for EK EVO 6...9 G... and EK EVO 6...9 GL-E/GL-EF3/GL-EUF	3751646
	for EK EVO 6/7 GL-EZ3	3751647

FREQUENCY CONVERTER ARRANGEMENT

Burner prepared to be connected to an external frequency converter; this variant includes the VSM module to control the frequency converter, LCM module must be ordered separately

EK EVO 6.2400 G-E/G-EF3 prepared for an external frequency converter of 3 kW	3751673
EK EVO 6.2900 G-E/G-EF3 prepared for an external frequency converter of 4 kW	3751674
EK EVO 7.3600 G-E prepared for an external frequency converter of 5,5 kW	3751675
EK EVO 7.3600 G-EF3 and EK EVO 7.4500 G-E/G-EF3 prepared for an external frequency converter of 7,5 kW	3751676
EK EVO 8.5800 G-E/G-EU3 prepared for an external frequency converter of 11 kW	3754025
EK EVO 8.7100 G-E/G-EU3 prepared for an external frequency converter of 15 kW	3754026
EK EVO 9.8700 G-E/G-EU3 prepared for an external frequency converter of 18,5 kW	3754027
EK EVO 9.10400 G-E/G-EU3 prepared for an external frequency converter of 22 kW	3754028
EK EVO 6.2400 GL... prepared for an external frequency converter of 3 kW	3751677
EK EVO 6.2900 GL... prepared for an external frequency converter of 4 kW	3751678
EK EVO 7.3600 GL-E prepared for an external frequency converter of 5,5 kW	3751679
EK EVO 7.3600 GL-EF3 and EK EVO 7.4500 GL-E/GL-EF3 prepared for an external frequency converter of 7,5 kW	3751680
EK EVO 8.5800 GL-E prepared for an external frequency converter of 11 kW	3755057
EK EVO 8.7100 GL-E and EK EVO 8.5700 GL-EF3 prepared for an external frequency converter of 15 kW	3755058
EK EVO 9.8700 GL-E/GL-EUF prepared for an external frequency converter of 18,5 kW	3755059
EK EVO 9.10400 GL-E/GL-EUF and EK EVO 9.6500 GL-EF3 prepared for an external frequency converter of 22 kW	3755060

MAX GAS PRESSURE SWITCH (mounted on the gas train)

EK EVO 6/7	with Siemens threaded gas trains	3751669
	with Siemens flanged gas trains	3751670
	with Dungs threaded gas trains	3751671
	with Dungs flanged gas trains	3751672

	with Dungs flanged gas trains	3754024

STAR/DELTA MOTOR STARTER

Star/Delta 4,0 G/BT3 for EK EVO 6.2900 G-E, G-EF3, GL-EZ3 and GL-E, GL-EF3	3751650
Star/Delta 5,5 G/BT3 for EK EVO 7.3600 G-E, GL-EZ3 and GL-E	3751651
Star/Delta 7,5 G/BT3 for EK EVO 7.3600 G-EF3, GL-EF3 and EK EVO 7.4500 G-E, G-EF3, GL-EZ3 GL-E, GL-EF3	3751652

BURNER VARIANTS (options already mounted in factory)

PED EQUIPMENT

Equipment of the gas train and the burner body for continuous operation (PED):

- controller and flame sensor approved for continuous operation,
- maximum gas pressure switch on the gas train,
- test burner (to bleed the gas train),
- PED Conformity Declaration.

Note: if required, the antivibrating coupling (to avoid mechanical tension) has to be selected as option

BURNER KITS (delivered separately)

O₂ TRIM for BT300, Etamatic and Etamatic OEM

This device optimizes the combustion in order to keep the air excess as much stable as possible irrespective of the changes that can occur during operations, for instance slight calorific value variations, combustion air temperature and pressure. This improves the seasonal efficiency and therefore reduces the fuel consumption.

The kit includes all the fittings for the installation. Main components are:

- control unit with display;
- probe;
- intake pipe to be fixed to the stack (choose the proper length).

The control unit has to be installed close to the probe (max 20 m of cable)

The probe needs a calibration but no calibration gas is necessary.

The display shows the O₂ content.

This kit needs a LCM module kit installed in the burner control panel (see the relevant section in the catalogue).

Maximum distance between the control unit and the burner control panel is 500 m.

	Output	Probe lenght	Code
Kit for O ₂ trim - intake pipe 300 mm long - Flue temp max 300 °C - display for O ₂ visualization	1 x 4-20 mA	300 mm	3751129
Kit for O ₂ trim - intake pipe 450 mm long - Flue temp max 300 °C - display for O ₂ visualization	1 x 4-20 mA	450 mm	3756531
Kit for O ₂ trim - intake pipe 300 mm long - Flue temp max 300 °C	1 x 4-20 mA	300 mm	3751701
Kit for O ₂ trim - intake pipe 450 mm long - Flue temp max 300 °C	1 x 4-20 mA	450 mm	3756532

O₂ TRIM with CO measure for BT300, Etamatic and Etamatic OEM

This device optimizes the combustion in order to keep the air excess as low as possible in order to maximize the seasonal efficiency and therefore minimize the fuel consumption.

In addition to the features of the O₂ trim only, this kit reduces the air excess to its minimum because this system continuously measures the CO content in the flue: should the air excess be reduced too much, the CO raises and the system reacts by increasing the air excess in order to keep firing in safe conditions.

The kit includes all the fittings for the installation. Main components are:

- control unit with display;
- probe;
- intake pipe to be fixed to the stack (choose the proper length).

The control unit has to be installed close to the probe (max 20 m of cable).

The probe needs a calibration but no calibration gas is necessary.

The display shows the O₂ content.

This kit need a LCM module kit installed in the burner control panel (see the relevant section in the catalogue).

Maximum distance between the control unit and the burner control panel is 500 m.

Note: this system is not suitable for GL-EUF and L-EUF burners

	Output	Probe lenght	Code
O ₂ trim and CO control kit with 300 mm long probe - Flue temp max 300 °C	None	300 mm	3755046
O ₂ trim and CO control kit with 450 mm long probe - Flue temp max 300 °C	None	450 mm	3756533
O ₂ trim and CO control kit with 300 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA	300 mm	3754549
O ₂ trim and CO control kit with 450 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA	450 mm	3754550
O ₂ trim and CO control kit with 300 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA & 4 x digital	300 mm	3754551
O ₂ trim and CO control kit with 450 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA & 4 x digital	450 mm	3754552

- M - measuring gas 300°C max
- 1 - plug
- 2 - probe signal
- 3 - Lambda Probe
- 4 - gas extraction device (GED)
- 5 - half-collar R1"1/4
- 6 - probe installation fitting (PIF)
- 7 - probe heater
- 8 - probe connection box (PCB)

SPECIAL CONFIGURATIONS (on request)

- Equipment according EN746-2
- Permanent ventilation
- 60 Hz versions
- Remote display (BT3xx)
- Separate switch box / terminal strip version (Etamatic OEM)
- LPG firing
- Hinge flange
- "Burner ON" feedback signal

Other special requests can be submitted to your Sales Reference for feasibility evaluation

Monoblock burners from 250 to 11200 kW

Gas, light oil and dual fuel

Design: smooth and integral

The original design of NEXTRON® range is the result of a successful integration between burner and ELCO technologies. NEXTRON® burners are able to perfectly integrate themselves in any installation and professionals will appreciate the innovative construction that ease maintenance.

Unique Low NOx performance

Developed and improved by ELCO R&D department, the Free Flame technology is a unique combustion process. This ELCO technology is capable to reach the NOx levels required by the most severe standards for all types of combustion chambers, whether they are 3-pass or reverse pass boilers.

High acoustic comfort

The NEXTRON® burner range offers a high acoustic comfort thanks to the Low Noise System. The unique air intake channel is carefully designed to achieve an acoustic level significantly lower than 80 dB(A) up to 10 MW.

This integrated and patented system on all NEXTRON® burners is definitely a good replacement of the traditional bulky sound proofing box.

Built-in and modular switch cabinet

All the NEXTRON® burners feature integrated switch cabinet, the ISC System, with modular concept for control devices and accessories:

- adjusting and safety control box
- EMC protected power circuit of fan motor
- display with command keyboard in front of the panel

The ISC System houses options and accessories, such as the power regulator and the frequency inverter Variatron, and customizes each burner according to the installation needs.

MAIN TECHNICAL FEATURES

- Two stage progressive/modulating forced draught burner.
- Fuels:
 - natural gas, $Hi = 6,99 \dots 11,39 \text{ kWh/Nm}^3$
 - LPG, $Hi = 25,89 \text{ kWh/Nm}^3$
 - light oil, viscosity $6 \text{ mm}^2/\text{s}$ at 20°C , $Hi = 11,86 \text{ kWh/kg}$
- Combustion technology:
 - Low NOx class 2 ($<120 \text{ mg/kWh}$) and class 3 ($<80 \text{ mg/kWh}$) in gas operation according to EN676
 - Low NOx class 2 ($<185 \text{ mg/kWh}$) and class 3 ($<120 \text{ mg/kWh}$) in light oil operation according to EN267
- Integrated switch cabinet (ISC System) with modular concept complete for an easy installation with:
 - BT300 control box (MDE2 System and display);
 - fan motor direct start-up;
 - enumerated connection terminals;
 - power regulator (option);
 - speed controller Variatron (option);
 - O_2 control (option);
 - Bus interface (option)
- Innovative design allowing easy access to burner components for fast start-up and reduced maintenance time and space
- Three flame tube lengths available
- Secured burner head adjustments during maintenance (RTC System)
- Unique air intake channel design (patented) to reduce acoustic levels (Low Noise System)
- Closing of the air damper on burner shut-down
- Multiple gas train matching according to the inlet gas pressure
- Gas train factory assembled and tested for tightness and electrical security
- Products are in compliance with EN676 and EN267 European standards and with the following directives:
 - 2014/35/UE Low Voltage Directive
 - 2014/30/UE EMC Directive
 - 2009/142/CE Gas Appliances Directive
 - 2006/42/EC Machinery Directive
 - 2011/65/EU RoHS2 Directive

RANGE OVERVIEW

N6 G-R, N7 G-R

390 ... 5000 kW

2 stage progressive/modulating mechanical

- Fuels:** natural gas, $Hi = 6,99 \dots 11,39 \text{ kWh/Nm}^3$;
LPG, $Hi = 25,89 \text{ kWh/Nm}^3$
- Emission class:** Low NOx class 2 ($<120 \text{ mg/kWh}$) according to EN676
- Protection level:** IP 41

**TECHNICAL DATA**

Test conditions conforming to EN676 - Temperature: 20°C - Pressure: 1013,5 mbar - Altitude: 0 m a.s.l.

PACKAGING

The burner is delivered in 2 packages containing:

- burner body with mounted combustion head, boiler fixing accessories and technical documentation;
- gas train and filter.

PACKAGING

The complete burner is delivered on a film-wrapped pallet composed of 1 package containing:

- burner body with mounted combustion head, boiler fixing accessories, technical data including electrical diagram, exploded view, spare parts list, and instruction manual.

BURNER VARIANTS (options already mounted in factory)

LCM MODULE (for communication, O₂ control, frequency converter)

Module mounted in factory, requested for O₂ control, Variatron and communication buses connections (the module is available also on request as a separate kit) Note: only one LCM module is necessary for these 3 options	3752433
--	----------------

MODULATING OPERATION

Regulator RWF55 + instruction manual mounted in factory on the switch cabinet to be connected to the appropriate probe (see "BURNER KITS" session)	for N6/N7 G-R/V/VF3	3752363
	for N6...N9 in electronic configuration	3752364
	for N6/N7 GL-RZ3	3752365

FREQUENCY CONVERTER

Variatron mounted in factory inside the switch cabinet including the VSM module for the burners with BT300 control box
Note: one LCM module is required and must be ordered separately (for burners equipped with the BT300)

Frequency converter for N6.2400 G-V and G-VF3	3750782
Frequency converter for N6.2900 G-V and G-VF3	3750783
Frequency converter for N7.3600 G-V	3750784

Frequency converter for N9.10400 GL... and L-E	3751425
Frequency converter for N9.8700 GL-EUF	3751498
Frequency converter for N9.10400 GL-EUF	3751499

FREQUENCY CONVERTER ARRANGEMENT

Burner prepared to be connected to an external frequency inverter
Note: one LCM module is required and must be ordered separately (for burners equipped with the BT300)

N6 G-V prepared for an external frequency converter	3751453
N7.3600 G-V/G-VF3 prepared for an external frequency converter of 5,5 kW	3751456
N7.4500 G-V/G-VF3 prepared for an external frequency converter of 7,5 kW	3751457
N6.2400 G-E/G-EF3 prepared for an external frequency converter of 3 kW	3751426
N6.2900 G-E/G-EF3 prepared for an external frequency converter of 4 kW	3751427
N7.3600 G-E prepared for an external frequency converter of 5,5 kW	3751428
N7.3600 G-EF3 and N7.4500 G-E/G-EF3 prepared for an external frequency converter of 7,5 kW	3751429
N8.5800 G-E prepared for an external frequency converter of 11 kW	3751113
N8.7100 G-E prepared for an external frequency converter of 15 kW	3751114
N9.8700 G-E prepared for an external frequency converter of 18,5 kW	3751115
N9.10400 G-E prepared for an external frequency converter of 22 kW	3751116
N6 GL... and N6 L... prepared for an external frequency converter of 3 kW	3751430
N6 GL... and N6 L... prepared for an external frequency converter of 4 kW	3751431
N7 GL... and N7 L... prepared for an external frequency converter of 5,5 kW	3751432
N7 GL... and N7 L... prepared for an external frequency converter of 7,5 kW	3751433
N8 GL... and N8 L... prepared for an external frequency converter of 11 kW	3751434
N8 GL... and N8 L... prepared for an external frequency converter of 15 kW	3751435
N9 GL-E and N9 L... prepared for an external frequency converter of 18,5 kW	3751436
N9 GL-E/GL-EF3 and N9 L... prepared for an external frequency converter of 22 kW	3751437
N9.8700 GL-EUF prepared for an external frequency converter of 18,5 kW	3751500
N9.10400 GL-EUF prepared for an external frequency converter of 22 kW	3751501

BURNER VARIANTS (options already mounted in factory)**PED EQUIPMENT**

Equipment of the gas train and the burner body for continuous operation (PED): controller and flame sensor approved for continuous operation, maximum gas pressure switch on the gas train, test burner (to bleed the gas train), PED Conformity Declaration.

Note: if required, the antivibrating coupling (to avoid mechanical tension) has to be selected as option

REMOTE SIGNAL 4-20 mA

Remote signal 4-20 mA for BT300 burner variant (Note: one LCM module is required for the burners equipped with the BT300)	14099397
--	----------

BURNER KITS (delivered separately)**O₂ TRIM for BT300, Etamatic and Etamatic OEM**

This device optimizes the combustion in order to keep the air excess as much stable as possible irrespective of the changes that can occur during operations, for instance slight calorific value variations, combustion air temperature and pressure. This improves the seasonal efficiency and therefore reduces the fuel consumption.

The kit includes all the fittings for the installation. Main components are:

- control unit with display;
- probe;
- intake pipe to be fixed to the stack (choose the proper length).

The control unit has to be installed close to the probe (max 20 m of cable).

The probe needs a calibration but no calibration gas is necessary.

The display shows the O₂ content.

This kit needs a LCM module kit installed in the burner control panel (see the relevant section in the catalogue).

Maximum distance between the control unit and the burner control panel is 500 m.

	Output	Probe lenght	Code
Kit for O ₂ trim - intake pipe 300 mm long - Flue temp max 300 °C - display for O ₂ visualization	1 x 4-20 mA	300 mm	3751129
Kit for O ₂ trim - intake pipe 450 mm long - Flue temp max 300 °C - display for O ₂ visualization	1 x 4-20 mA	450 mm	3756531
Kit for O ₂ trim - intake pipe 300 mm long - Flue temp max 300 °C	1 x 4-20 mA	300 mm	3751701
Kit for O ₂ trim - intake pipe 450 mm long - Flue temp max 300 °C	1 x 4-20 mA	450 mm	3756532

O₂ TRIM with CO measure for BT300, Etamatic and Etamatic OEM

This device optimizes the combustion in order to keep the air excess as low as possible in order to maximize the seasonal efficiency and therefore minimize the fuel consumption.

In addition to the features of the O₂ trim only, this kit reduces the air excess to its minimum because this system continuously measures the CO content in the flue: should the air excess be reduced too much, the CO raises and the system reacts by increasing the air excess in order to keep firing in safe conditions.

The kit includes all the fittings for the installation. Main components are:

- control unit with display;
- probe;
- intake pipe to be fixed to the stack (choose the proper length).

The control unit has to be installed close to the probe (max 20 m of cable).

The probe needs a calibration but no calibration gas is necessary.

The display shows the O₂ content.

This kit need a LCM module kit installed in the burner control panel (see the relevant section in the catalogue).

Maximum distance between the control unit and the burner control panel is 500 m.

Note: this system is not suitable for GL-EUF and L-EUF burners

	Output	Probe lenght	Code
O ₂ trim and CO control kit with 300 mm long probe - Flue temp max 300 °C	None	300 mm	3755046
O ₂ trim and CO control kit with 450 mm long probe - Flue temp max 300 °C	None	450 mm	3756533
O ₂ trim and CO control kit with 300 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA	300 mm	3754549
O ₂ trim and CO control kit with 450 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA	450 mm	3754550
O ₂ trim and CO control kit with 300 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA & 4 x digital	300 mm	3754551
O ₂ trim and CO control kit with 450 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA & 4 x digital	450 mm	3754552

- M - measuring gas 300°C max
 1 - plug
 2 - probe signal
 3 - Lambda Probe
 4 - gas extraction device (GED)
 5 - half-collar R1"1/4
 6 - probe installation fitting (PIF)
 7 - probe heater
 8 - probe connection box (PCB)

BURNER KITS (delivered separately)

- Separate switch box / terminal strip version (Etamatic OEM)
- LPG firing
- Hinge flange
- "Burner ON" feedback signal

Other special requests can be submitted to your Sales Reference for feasibility evaluation

Monoblock burners from 1300 to 16000 kW

Gas, light oil and dual fuel

High power and ease of use up to 16 MW

Wherever a compact solution is needed, a monoblock burner offers advantages over individual components. However, above a power output of 10 MW, the conventional burner becomes too heavy: ease of handling during installation and maintenance work suffers, the strain on the boiler door is too high. N10 burner solves this problem with innovative, weight-saving enclosure technology. The key feature is the physical division of the burner into a support frame and a separate air-routing housing. Thanks to its innovative solutions N10 provides high performance and ease of use up to 16 MW.

Load distribution and reduced weight

N10 is characterised by a chassis frame mounted directly on the door of the generator; this independently supports the fan and motor assembly, which constitutes a large proportion of the total weight of the burner.

This structure significantly reduces the torque generated by the motor and, consequently, reduces the strain on the boiler door.

The choice of materials has been dictated by the need to reduce weight: as a result, the combustion air inlet is made of composite materials, and the air register flaps in aluminium.

Simplified structure to improve usability

The burner head and the housing have been almost entirely separated in order to allow sufficient space for the combustion components to be easily removed. The air pipe between the housing and the burner head is simply closed by a removable cover. It is no longer necessary to pivot the entire body of the burner to one side or the other.

An added advantage is the ability to fix the frame to the ground, depending on the application, thus relieving the generator door from any mechanical stress.

Advanced design for low noise levels

Special attention has been paid to fan design. The burner's acoustic level meets industry standards, providing a more comfortable working environment. The two main characteristics which limit the noise emitted by a fan are a high and constant static pressure and the use of a wheel with rearward facing blades. The result is a stable combustion and reduced noise at the air inlet.

MAIN TECHNICAL FEATURES

- Two stage progressive/modulating forced draught burner
- Fuels:
 - natural gas, $Hi = 6,99 \dots 11,39 \text{ kWh/Nm}^3$
 - light oil, viscosity $6 \text{ mm}^2/\text{s}$ at 20°C , $Hi = 11,86 \text{ kWh/kg}$
- Combustion technology:
 - Low NOx class 2 ($<120 \text{ mg/kWh}$) and class 3 ($<80 \text{ mg/kWh}$) in gas operation according to EN676
 - Low NOx class 2 ($<185 \text{ mg/kWh}$) and class 3 ($<120 \text{ mg/kWh}$) in light oil operation according to EN267
- Control box: built-in or external according to customer requirements
- Three flame tube lengths available
- Secured burner head adjustments during maintenance (RTC System)
- Closing of the air damper on burner shut-down
- Multiple gas train matching according to the inlet gas pressure
- Gas train factory assembled and tested for tightness and electrical security
- Products are in compliance with EN676 and EN267 European standards and with the following directives:
 - 2014/35/UE Low Voltage Directive
 - 2014/30/UE EMC Directive
 - 2009/142/CEE Gas Appliances Directive
 - 2006/42/EC Machinery Directive
 - 2011/65/EU RoHS2 Directive

Monoblock burners from 68 to 17000 kW

Heavy oil

ELCO offers a wide range of heavy oil burners designed for traditional applications and industrial process applications. All models are suitable to work with heavy oil up to 50°E at 50°C.

HO-TRON range is available in different configurations with a power output covering a range from 68 kW to 17 MW.

Burners are available in the following versions:

- one stage, for HO-TRON 0 and HO-TRON 1, models up to 340 kW;
- two stages, up to the model HO-TRON 4;
- two stage progressive mechanical operation (up to 17 MW).

All burners feature easy access to the combustion component in order to simplify the maintenance operations. The maintenance activities are simplified also thanks to the slide bar system, which allows easy access to the combustion components, available on all models up to HO-TRON 6.

All models are fitted with heavy oil electric heating system on board and integrated electrical panel complete with pre-heater management system.

Ring system components for oil preparation can be designed and supply on request.

For a large extent of applications customized solutions can be offered in order to meet plants requirements.

MAIN TECHNICAL FEATURES

- One stage, two stages and two stage progressive/modulating mechanical forced draught burners
- Electronic version available on request
- Fuel: heavy oil, viscosity 50°E at 50°C, $H_i = 10,97 \text{ kWh/kg}$
- Two combustion head lengths available
- Pump mounted on the body up to model HO-TRON 6.8500 and separated motor-pump starting from model HO-TRON 6.10500
- Electrical heavy oil heater on board (oil supply to the burner at 80°C and 3 bar)
- Additional heaters on the pipes and the valves, into the pump and the nozzle holder
- Closing of the air flap on burner shut-down
- Complete control panel mounted on the burner with electrical equipment
- Products are in compliance with EN267 European standards and with the following directives:
 - 2014/35/UE Low Voltage Directive
 - 2014/30/UE EMC Directive
 - 2006/42/EC Machinery Directive
 - 2011/65/EU RoHS2 Directive

RANGE OVERVIEW

Monoblock burners from 414 to 17000 kW

Dual fuel (gas/heavy oil)

GHO-TRON burners are suitable to work with natural gas or heavy oil up to 50°E at 50°C.

This dual fuel range is available in two different configurations:

- two stage version with electric servomotor and integrated system for the regulation of air and fuel for the model GHO-TRON 3
- two stage progressive version with electrical servomotor and double adjustable mechanical cam that allows air and fuel fine tuning (for models up to 17 MW).

GHO-TRON burners feature an adjustable combustion head for easy regulation and matching with different combustion chambers.

All burners are characterized by easy access to the combustion component in order to simplify the maintenance operations.

All the models are fitted with special components for heavy oil combustion.

Models starting from GHO-TRON 3 are equipped with digital thermoregulator integrated on the front panel to grant temperature stability of the fuel. All the burners of the series have an heavy oil electric heating system on board and, startin from GHO-TRON 6, gas pilot included with separate supply line.

Configurated and special version on request for selected type of applications and fuel characteristics.

MAIN TECHNICAL FEATURES

- Two stages and two stage progressive/modulating mechanical forced draught burners
- Electronic version available on request
- Fuels:
 - natural gas, $Hi = 6,99 \dots 11,39 \text{ kWh/Nm}^3$
 - heavy oil, viscosity 50°C at 50°C, net calorific value 10,97 kWh/kg
- Two combustion head lengths available
- Gun type architecture:
 - separated forced draught fan;
 - optimal accessibility;
 - easy maintenance;
 - secured burner head adjustments;
 - closing of the air flap on burner shut-down
- Separated motor-pump on board
- Electrical heavy oil heater (oil supply to the burner at 80°C and 3 bar)
- Additional heating on the pipes and the valves, into the pump and the nozzle holder
- Closing of the air flap on burner shut-down
- Complete electrical equipment in a switch cabinet mounted on the burner with control panel
- Products are in compliance with EN267 and EN676 European standards and with the following directives:
 - 2014/35/UE Low Voltage Directive
 - 2014/30/UE EMC Directive
 - 2009/142/CEE Gas Appliances Directive
 - 2006/42/EC Machinery Directive
 - 2011/65/EU RoHS2 Directive

Duoblock burners from 230 to 80000 kW

Gas, light oil, heavy oil and dual fuel operation

All the benefits of the separate ventilation

In contrast to monoblock burners, duoblock burners are made up of two units, or blocks, as the name implies: the burner head with the air inlet, and the separately-installed fan; the two units are connected via an air duct.

The separate installation of the fan offers several benefits:

- the fan can be installed in a separate room, for instance in the cellar; this results in considerably lower noise levels in the boiler room; when the fan is installed in the same room, a fan enclosure can be used to achieve optimum sound absorption, without inhibiting access to the burner;
- less space required in front of the boiler and in the combustion chamber;
- individual fan layout with optimum adaptation of the fan characteristic curve to suit the pressure ratio of the heat generator; this guarantees pulsation-free and stable burner behaviour, even on heat generators with high resistance on the exhaust side;
- combustion air can be pre-heated to increase installation efficiency;
- lower weight loading on the boiler front.

ELCO duoblock burners are designed to satisfy the widest range of needs and can be applied to the most various type of civil and industrial solutions like fire-tube boilers, water-tube boilers, dryers and melting furnaces.

These burners enable installation to realize a modular and flexible combustion solution with a high degree of personalization. This results in a high performance installations at the lowest running cost.

The burners are built to be connected to an external air supply and can be supplied together with built-in or separate control panel, electronic or mechanical adjustment, flue gas recirculation, heavy oil pump unit and heating unit.

ELCO is able to offer an extremely wide range of industrial duoblock burners thanks to three different series, EK-DUO, RPD and D-TRON, covering a power range from 230 kW up to 80 MW.

This range of burners is able to fulfill high capacity and high turndown needs and allows installation in very high pressurized combustion chambers.

All duoblock models can work with pre-heated combustion air up to 200°C and can be used in order to achieve greater values of efficiency.

D-TRON

MAIN TECHNICAL FEATURES

- Two stages and progressive/modulating forced draught burners, designed to be connected to an external air supply
- Fuels:
 - natural gas, $Hi = 6,99 \dots 11,39 \text{ kWh/Nm}^3$;
 - light oil, viscosity $6 \text{ mm}^2/\text{s}$ at 20°C , $Hi = 11,86 \text{ kWh/kg}$;
 - heavy oil, viscosity $20\dots350 \text{ mm}^2/\text{s}$ at 50°C ;
 - other fuels on request;
- Electrical switch cabinet manufactured in different configurations assembled on the burner or delivered separately and includes the burner control:
 - control box for burner operation sequences;
 - contactors and remote overload cut-out for control of the fan unit;
 - fuse to protect the auxiliary equipment;
 - switches, warning and information lights, manual power control;
 - ready to accept PID power regulator (option)
- Gas train factory assembled and tested for tightness and electrical security
- Electronic version available on request
- Products are in compliance with EN 267 and EN 676 European standards

EK-DUO

MAIN TECHNICAL FEATURES

- Progressive/modulating forced draught burners, designed to be connected to an external air supply
- Fuels:
 - natural gas, $Hi = 6,99 \dots 11,39 \text{ kWh/Nm}^3$;
 - light oil, viscosity $6 \text{ mm}^2/\text{s}$ at 20°C , $Hi = 11,86 \text{ kWh/kg}$
 - other fuels on request
- Flame tube length according to installation
- Secured burner head adjustments during maintenance
- Closing of the air damper on burner shutdown
- Control box: built-in or external according to customer requirements
- Gas train factory assembled and tested for tightness and electrical security
- Products are in compliance with EN 267 and EN 676 European standards

RPD

MAIN TECHNICAL FEATURES

- Progressive/modulating forced draught burner with register, designed to be connected to an external air supply
- Fuels:
 - natural gas, $Hi = 6,99 \dots 11,39 \text{ kWh/Nm}^3$;
 - light oil, viscosity $6 \text{ mm}^2/\text{s}$ at 20°C , $Hi = 11,86 \text{ kWh/kg}$;
 - heavy oil, viscosity $20\dots350 \text{ mm}^2/\text{s}$ at 50°C ;
 - other fuels on request;
 - co-combustion of various fuels or to eliminate liquid waste on request
- Air/gas ratio with Etamatic digital control box or with mechanical compound
- Adjustable flame length with air registers
- Flame tube length according to installation
- Closing of the air damper on burner shutdown
- Control box: built-in or external according to customer requirements
- Gas train factory assembled and tested for tightness and electrical security
- Products are in compliance with EN267 and EN676 European standards

D-TRON

230 ... 34000 kW

2 stages and 2 stage progressive/modulating mechanical or electronic

- Fuels:** - natural gas, $H_i = 6,99 \dots 11,39 \text{ kWh/Nm}^3$;
- light oil, viscosity $6 \text{ mm}^2/\text{s}$ at 20°C , $H_i = 11,86 \text{ kWh/kg}$;
- heavy oil, viscosity $20 \dots 350 \text{ mm}^2/\text{s}$ at 50°C ;
- other fuels on request;
- Emission class:** - Low NOx class 2 ($<120 \text{ mg/kWh}$) and class 3 ($<80 \text{ mg/kWh}$)
according to EN676 in gas
- Low NOx class 1 ($<250 \text{ mg/kWh}$) or class 2 ($<120 \text{ mg/kWh}$)
according to EN267 in oil
- Protection level:** IP 41 (IP 54 and IP 65 on request)

EK-DUO

600 ... 16000 kW

2 stage progressive/modulating electronic

- Fuels:** - natural gas, $Hi = 6,99 \dots 11,39 \text{ kWh/Nm}^3$;
- light oil, viscosity $6 \text{ mm}^2/\text{s}$ at 20°C , $Hi = 11,86 \text{ kWh/kg}$;
- other fuels on request
- Emission class:** - Low NOx class 3 ($<80 \text{ mg/kWh}$) according to EN676 in gas and
- Low NOx class 3 ($<120 \text{ mg/kWh}$) according to EN267 in light oil
- Protection level:** IP 41 (IP 54 and IP 65 on request)

CONTROL UNITS

CONTROL UNIT BT300

This device is composed of control box for safety and for programming the parameters of the burner.

Main functions: control of mono- and dual fuel burners with intermittent or continuous operation through a step by step servo motor up to 10 Nm.
Equipable with the following modules: fan speed regulation, burner power regulation, the control of combustion air excess, CO level through simple or combined probe and the communication via Bus system.

Specific functions for each type of control box:

- BT320 for single fuel burner and intermittent operation, with an output 0...10 V, 0/4...20 mA and the management of two servomotors;
- BT330 for single fuel burner and continuous operation, using suitable flame detectors, with an output 0...10 V, 0/4...20 mA and the management of three servomotors;
- BT340 for dual fuel burner and continuous operation, using suitable flame detectors, with an output 0...10 V, 0/4...20 mA and the management of three servomotors.

Main characteristics of the control box:

- power supply: 230 V -15...+10%, 50 Hz;
- servomotors from 1,2 to 10 Nm.

COMMUNICATION MODULE

BT300 module for electronic burners mounted in the switch cabinet of the burner (Note: one LCM module is required)	ModBus/BT3	3754081
	ProfiBus/BT3	3750142
	Ethernet/BT3	in progress

LCM MODULE

Module required for O ₂ control, Variatron and communication buses connections	3752286
---	---------

Note: only one LCM module is necessary for these 3 options; the module is already included on dual fuel burners

REMOTE SOFTWARE

Kit to connect a PC laptop to the BT300 for its parametrization	LSA100 + USB/CAN + CD-Rom	3751130
---	---------------------------	---------

CONTROL UNIT ETAMATIC

Electronic control Etamatic with 4 DPS-adjusting outputs for servodrives up to 50 mA of direct current with: <ul style="list-style-type: none">• incorporated tightness control of the valves;• incorporated regulator of power;• incorporated counter of working hours with pulse transducer;• incorporated relay of flame;• incorporated program of O₂ regulation, including the system Lamtec with connecting bus.	Code on request, depending on configuration
Electronic control Etamatic S with a steady adjusting output for the regulation of the number of revolutions of the fan supplying the air of burning and 4 DPS-adjusting outputs for the servodrives up to 50 mA of direct current with: <ul style="list-style-type: none">• incorporated tightness control of the valves;• incorporated regulator of power;• incorporated counter of working hours with pulse transducer;• incorporated relay of flame;• incorporated program of O₂ regulation, including the system Lamtec with connecting bus.	Code on request, depending on configuration

For the control of the number of revolutions it is required additionally:

- Static frequency converter;
- Switch Namur.

ETAMATIC OEM ACCESSORIES

Software for remote PC connection for Lamtec Etamatic OEM with all its accessories for the connection (available languages: english, german and french)	3753366
Customer interface (DISPLAY) for ETAMATIC OEM	3751683
Hand held programming unit for Etamatic OEM (languages: german and english) - Alternative to software 3753366 when PC is not available	1718850339
Hand held programming unit for Etamatic OEM (language: russian) - Alternative to software 3753366 when PC is not available	3754519
Profibus module for ETA-OEM with 2 m cable	3752995

Note: either customer interface or operation and display unit has to be included

O₂ TRIM for BT300, Etamatic and Etamatic OEM

This device optimizes the combustion in order to keep the air excess as much stable as possible irrespective of the changes that can occur during operations, for instance slight calorific value variations, combustion air temperature and pressure. This improves the seasonal efficiency and therefore reduces the fuel consumption.

The kit includes all the fittings for the installation. Main components are:

- control unit with display;
- probe;
- intake pipe to be fixed to the stack (choose the proper length).

The control unit has to be installed close to the probe (max 20 m of cable)

The probe needs a calibration but no reference gas is necessary.

The display shows the O₂ content.

This kit needs a LCM module kit installed in the burner control panel (see the relevant section in the catalogue).

Maximum distance between the control unit and the burner control panel is 500 m.

	Output	Probe lenght	Code
Kit for O ₂ trim - intake pipe 300 mm long - Flue temp max 300 °C - display for O ₂ visualization	1 x 4-20 mA	300 mm	3751129
Kit for O ₂ trim - intake pipe 450 mm long - Flue temp max 300 °C - display for O ₂ visualization	1 x 4-20 mA	450 mm	3756531
Kit for O ₂ trim - intake pipe 300 mm long - Flue temp max 300 °C	1 x 4-20 mA	300 mm	3751701
Kit for O ₂ trim - intake pipe 450 mm long - Flue temp max 300 °C	1 x 4-20 mA	450 mm	3756532

O₂ TRIM with CO measure for BT300, Etamatic and Etamatic OEM

This device optimizes the combustion in order to keep the air excess as low as possible in order to maximize the seasonal efficiency and therefore minimize the fuel consumption.

In addition to the features of the O₂ trim only, this kit reduces the air excess to its minimum because this system continuously measures the CO content in the flue: should the air excess be reduced too much, the CO raises and the system reacts by increasing the air excess in order to keep firing in safe conditions.

The kit includes all the fittings for the installation. Main components are:

- control unit with display;
- probe;
- intake pipe to be fixed to the stack (choose the proper length).

The control unit has to be installed close to the probe (max 20 m of cable).

The probe needs a calibration but no reference gas is necessary.

The display shows the O₂ content.

This kit need a LCM module kit installed in the burner control panel (see the relevant section in the catalogue).

Maximum distance between the control unit and the burner control panel is 500 m.

Note: this system is not suitable for GL-EUF and L-EUF burners

	Output	Probe lenght	Code
O ₂ trim and CO control kit with 300 mm long probe - Flue temp max 300 °C	None	300 mm	3755046
O ₂ trim and CO control kit with 450 mm long probe - Flue temp max 300 °C	None	450 mm	3756533
O ₂ trim and CO control kit with 300 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA	300 mm	3754549
O ₂ trim and CO control kit with 450 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA	450 mm	3754550
O ₂ trim and CO control kit with 300 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA & 4 x digital	300 mm	3754551
O ₂ trim and CO control kit with 450 mm long probe - Flue temp max 300 °C	4 x 0/4-20mA & 4 x digital	450 mm	3754552

Notes:

- oil supply pressure (pressure range) is created by separate force pump in ring pipeline or by lift of tank to greater height;
- for oil feed line of monoblock burners, operating with oil EL and L (heavy oil M and S on request);
- suits for equipment in accordance with DIN 4755/2, TRD 411, TRD 604.

OIL CONNECTION UNIT

Unit consists of:
 - double ball valve (with or without limit switch);
 - oil filter
 - safety valve with relief valve, non return valve
 - pipes, threaded connections, seals
